What's New in the AutoCAD?

Autodesk is releasing AutoCAD 2023, the latest version of the award-winning AutoCAD software, to help you meet the challenges of complex design, visual communication and electronic manufacturing. This release of AutoCAD combines important new features and enhancements with a significant number of existing capabilities to offer unmatched power to solve your design challenges. Autodesk's mission is to help people imagine, create and deliver a better future. Our success depends on our ability to enable anyone to develop and deliver products that matter. Through a diverse portfolio of software, hardware and services, Autodesk gives customers around the world the ability to leverage digital technology to build, operate and sustain vital assets, from the ground up. Why Autodesk? Our vision of the future is one in which everyone has access to the best tools, the easiest-to-use interfaces, and can collaborate together in ways that are both useful and inspiring. Use AutoCAD on tablets, phones and, most importantly, on your desktop PC. In the past, AutoCAD lacked a robust web-based version that could work on any device. Now, users can draw and work on any device, anywhere, and have all the same benefits of drawing, creating, editing and sharing AutoCAD drawings. With the latest version of AutoCAD, 3D Visualize and CNC machines can automatically generate output in a variety of file types and easily integrate it into the 3D Model. CNC machines can also now build a custom tool path based on the result of a part trace, which allows them to save labor and increase the speed of the manufacturing process. The new 2019 release of AutoCAD includes these features: Inline Data: Specify in-line data as part of a drawing, allowing you to load data as a picture or part of a drawing.
